ABSTRACT

A living organism submits to the laws of thermodynamics. His stability depends on his energy potential. New paradigm of health care: it is necessary to control energy potential, to prevent to the exit of individual from the «safe» zone of health. Physical activity is a factor that limits life and health of man.

KEYWORDS: Strategy of health protection; mechanisms of health; physical activity for a health

SHORT COMMUNICATION

In XXI century changes are in process, radically changing life of Humanity. Only that remains unchanging: people are ill and, eventually, die. Thus, nobody sees paradoxes in a fight against inevitability of illnesses and death. However, they exist. First from them consists in that, putting the task the achievement of health, medical science wrestles with illnesses. This paradox erroneous, but firmly deep-rooted ideas are the basis of that a health is this absence of illness. Meantime, different mechanisms and different technologies of influence have a health and illness in the basis on them. The second paradox yet more striking: a fight against illnesses takes place despite good sense, id Est contrary well to the known Natural laws.

WHAT DOES SPEECH GO ABOUT?

Nothing in the world takes place without the expenses of energy. Energy manages all, that takes place in the world. Her laws determine existence of Universe, our Planet, all living and lifeless. Well and, certainly. Man. Do we consider in a due measure circumstance that a man is the open thermodynamics system functioning due to sunny energy, and his state is in a great deal determined by the laws of thermodynamics? Centuries-old experience of practical health protection gives a negative answer for this question. So, a source of life is sunny energy. The sequence of transformation of sunny energy through photosynthesis in energy of macro ergs is well known. Exactly the macro ergs of mitochondria provide the mechanisms of self-organization of the living system - homoeostasis, adaptation, reactivity, resistance, regeneration, reparation, thermoregulation, ontogenesis etc. These are the mechanisms of health. The damage of any of them results in development of pathology.

Nobody of drivers will search direct reason of failures in-process car, if an accumulator is discharged. And medicine until now searches the hidden reasons illnesses for that accepts one or another links of pathogeny. Although here they - lie on a surface: mitochondria’s, i.e. intracellular accumulators, is discharged. But medical science does not examine energy potential of the biosystem as basis of healthy existence and gives all forces and facilities to the fight against the consequences of deficit of energy, providing the process of vital functions.

In Figure1 interrelation of mechanisms of health and illnesses is presented. The left triangle (sanogenesis) is all the mechanisms indicated higher self-organization of the living system functioning due to sunny energy, and his state is in a great deal determined by the laws of thermodynamics? Centuries-old experience of practical health protection gives a negative answer for this question. So, a source of life is sunny energy. The sequence of transformation of sunny energy through photosynthesis in energy of macro ergs is well known. Exactly the macro ergs of mitochondria provide the mechanisms of self-organization of the living system - homoeostasis, adaptation, reactivity, resistance, regeneration, reparation, thermoregulation, ontogenesis etc. These are the mechanisms of health. The damage of any of them results in development of pathology. Here and all efforts of

difficult to over-estimate. Moreover, it is set [1] by us, that such for the health of man role of the organized motive activity it is the effect of overcompensation, arising up after the substantial on metabolism obviously not enough, physical activity, able to form potential of vital functions of cage goes down. One energy spending the substantial permanent expenses of energy of mitochondria disuse - one of basic laws of Nature.

Influencing on all vital functions of organism. Law of atrophy from erroneous conclusion. There is one circumstance, radically and durable adjusting, nothing threatens an organism. But this suppose that at a safe receipt checked of necessary for components life as nervous, endocrine and immune systems. It is possible to exhaust foods of metabolism. A triangle regulates the process of substrate macro ergs accumulate in mitochondria. On an exit are substances) prepared for oxidization. As a result of oxidization of reactions in an organism pass between solutions, but not hard included in her is food substrate, oxidant (oxygen) and water (all (curative establishments) of the industry of health, sent to renewal treatment and strengthening of health - different in fact technologies processes. Importance and necessity of similar radical change of strategy are conditioned by another very sad for humanity circumstance: on Humanity an evolutional catastrophe radical change of strategy are conditioned by another very sad for weak posterity, worsening of psyhofisical internals and other. Reason of all described phenomena one is a decline of stability of the open thermodynamics system which a human organism is, because of lack of energy in mitochondria. Obviously, came it is time of fight against pathology on monitoring and strengthening of health of man. Treatment and strengthening of health - different in fact and technologies processes. Importance and necessity of similar radical change of strategy are conditioned by another very sad for humanity circumstance: on Humanity an evolutional catastrophe approaches as biological degradation of HOMO SAPIENS [4]. Her signs: epidemic of chronic noninfectious diseases, comorbidity, speed-up rates of aging, violation of reproductive function, birth of weak posterity, worsening of psychosocial internals and outer. Reason of all described phenomena one is a decline of stability of the open thermodynamics system which a human organism is, because of lack of energy in mitochondria. Obviously, came it is time to be thoughtful above forming in addition to industry of illness (curative establishments) of the industry of health, sent to renewal of power potential of organism. If for whom - that of readers there were doubts in legitimacy of the expounded facts and conclusions, read once again epigraph to the article.
