Neuropsychiatric Disorders in Egyptian Children's After Divorcing

Abdel-Fattah HMM*

Neuropsychiatry Department, El. Abbassia Mental Hospital, Egypt

ABSTRACT

Background and Objective: In Egypt, as a result of the noticeable rise in divorce rates and the increase in the number of divorce children in a way that represents a danger to the public future, and because of the Personal Status Law that deprives the father of hosting or cohabitation or sharing custody with his children after the divorce.

Methods: Information was collected about the extent of the impact of the deprivation and absence of the father on the children of divorce from previous research And the Central Agency for Public Mobilization and Statistics and the Egyptian government portal.

Results: The data and results revealed that because of this random and unscientific law, these children are exposed to a great danger at all levels of development, which constitutes a major disaster.

Conclusion: The results indicate the urgent need for rapid legislative amendments aimed at implementing the shared care system and its owners and the father's hosting and coexistence with his children for the healthy development children of divorce in Egypt, in order to preserve the strength of the fabric of society and the solidity of the Egyptian state.

INTRODUCTION

Parental separation affects a child's development. Early parental divorce (during primary school) has been associated with greater behavior problems within the kid [1]. While divorce later in childhood or adolescence may dampen academic performance. Fatherless Children tend to suffer greater emotional and social difficulties than others do. Father absence mainly results from parental divorce and separation [2].

An increase within the divorce rate in Egypt (Figure 1) and increases the divorce Percentage, by Marriage Duration which become shorter (Figure 2). Have introduced the Absent Egyptian Father that defines as an ongoing emotional, social or spiritual deficit within the children's and their fathers after divorced, this deficit often leaves anger and pain, extreme behaviors, addictions or obsessions, inner sense of being lost and incomplete, lacking

assurance and self-confidence. In the Egyptian personal law, the father is prohibited from hosting his children or living with them after the divorce. he is only allowed to determine them in a very public place like clubs for 3 hours every week [3] and if he leaves them from this club, it is considered against the law of kidnapping and will cause the daddy to be imprisoned. During this situation, the daddy after the divorce is taken into account unjust, this law was passed in 2000 to convey material gains to women at the expense of the child's psychological development and basic needs, which caused many health and psychological crises and disasters for this generation of divorce children, including per the international scientific references mentioned (Figures 3).

- a) 63% of youth suicides are from fatherless homes [4].
- b) 85% of all children who show behavior disorders come from fatherless homes [5].
